SNAPSHOT BLOCK 966,670

CITY v3

70,714 LOTS · 46 PLATES

DOGCITY

ATLAS

The cartographic book of the city. Every plate is drawn from the city data at the snapshot below: the plan, the lots, the streets, the water and the places. Nothing in it is typed by hand.

EDITION

SNAPSHOT BLOCK	966,670
CITY	v3 (cidade-966670-v3)
GENERATED	2026-10-14
LOTS	70,714
BLOCKS	2,308
SECTORS	9
RINGS	R1 TO R27
AVENUES	A1 TO A12 · 168 RADIAL STREETS
PLATES	46, OF WHICH 27 REGISTRY SHEETS
INPUT DIGEST	273cb1ac4220ce2d

LAND REGISTRY · MERKLE ROOT

39e645c1805decc9109d4a830a2211aa
e253576219a0a96eb6cae56dc56fa776

Double SHA-256 over 86,517 leaves (70,714 lots and the address list), registry v4 (4 corners), version 3, at block 966,670. The root is read from the registry file when the book is generated.

WHAT IS NOT IN THIS BOOK

No wallet address is printed in this book. A lot is named by its lot id; who holds it is a matter for the registry, not for the map. Streets have a code and, for now, no name.

HOW TO READ THIS ATLAS

1 STREET ADDRESSES

R1 TO R27 — RINGS

Concentric streets, counted from the plaza outward. R1 is the ring around Satoshi Plaza, R27 is the outermost.

A1 TO A12 — AVENUES

The twelve great radial avenues, named like the hours of a clock face. A12 points north, A3 east, A6 south, A9 west.

h.nn — RADIAL STREETS

Between two avenues there are 13 radial streets, counted clockwise from the avenue before them. 3.07 is the 7th street after A3.

R15 × 3.07 — A CROSSING

A ring first, then a street. R15 × 3.07 is where ring R15 meets street 3.07.

Lanes inside a block are not streets and have no code. Streets have a code and, for now, no name.

2 THE LOT ID

S04-Q17-B1749-L017

SECTOR · BAND · BLOCK · LOT

S = the sector, S01 to S09. Sectors S01 to S06 are the six wedges of the city; S07 is the Spit, S08 the plaza, S09 the bay shore.

Q = the ring band of the block. Band Q lies between ring R18 and ring R19: S04-Q17 sits between R18 (mean radius 4,332 m) and R19 (4,572 m), and the example lot is 4,368 m from the plaza center. The rule holds for 69,705 of 70,714 lots; the Spit, the plaza and some lots of the shores and lakes number their bands by their own order and do not follow it.

B = the block number. Block numbers are printed on the registry sheets (plate 05.nn).

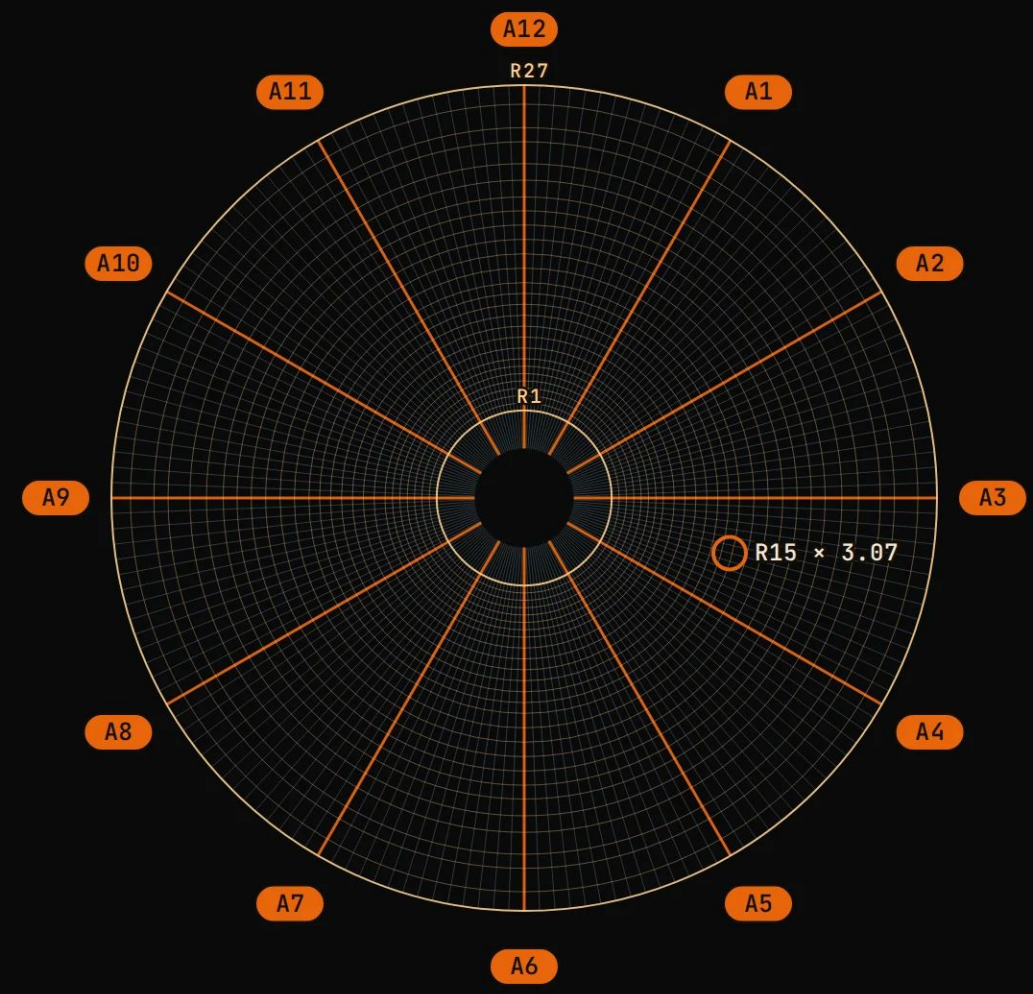
L = the lot inside its block. The example S04-Q17-B1749-L017 is on registry sheet 05.11.

3 SCALES

PLATES 01 02 03 04 06 07 08 09	8.33 M PER PIXEL
SHEETS 05.27	4 M PER PIXEL
SHEETS 05.01-05.26	1.6 M PER PIXEL
PLATES 09.2	1.25 M PER PIXEL
PLATES 10	0.26 M PER PIXEL

Every plate is 2,400 pixels wide and carries its own scale bar. The picture at 2,400 pixels is the reference size.

4 THE CLOCK FACE



The diagram draws the 27 rings and the 168 radials of the plan, not the blocks. The orange ring marks the example crossing.

5 NORTH AND SHEETS

North is up on every city plate. The registry sheets of the Spit and of the bay shore are turned to follow the shore: each carries a north arrow, and a small locator at its top left shows the sheet on the city.

The key map (plate 0.4) shows the rectangle of every registry sheet. The index at the end of the book (plates 11 to 11.2) says which sheet shows a given sector, ring, avenue, block or place.

The full list of lots by sheet is in the atlas data file, atlas.json, for the website to look up.

READING THE TABLE

The city has 2,308 blocks. 2,295 of them have the block number printed on a registry sheet; 13 are too small or too crowded to carry a number at any scale of the sheets.

A block is named by sector, ring band and number: S-Q-B, for example the first three parts of a lot id. A block number alone can repeat between ring bands.

Every block, printed or not, is listed with its sheet in the atlas data file, atlas.json, under the key blocks. Every lot is listed with its sheet under lot_sheet.

A block that crosses the edge of a sheet appears on the next sheet too, with the same number. The table counts a block on every sheet that holds some of its lots, so the column totals can add up to more than the city total.
