ATLAS

SNAPSHOT BLOCK 966,670

CITY v1

THE CARTOGRAPHIC BOOK OF THE CITY

70,714 LOTS · 51 PLATES

DOG·CITY

A T L A S

The cartographic book of the city. Every plate is drawn from the city data at the snapshot below: the plan, the lots, the streets, the water and the places. Nothing in it is typed by hand.

EDITION

SNAPSHOT BLOCK	966,670
CITY	v1
GENERATED	2026-10-18
LOTS	70,714
BLOCKS	2,308
SECTORS	9
RINGS	R1 TO R27
AVENUES	A1 TO A12 · 168 RADIAL STREETS
PLATES	51, OF WHICH 27 REGISTRY SHEETS

LAND REGISTRY · MERKLE ROOT

bc3bd0ae5e749eb9750e3a31657c1463
38b3d1dc51a97bdc61f0768f35395a64

Double SHA-256 over 86,517 leaves (70,714 lots and the address list), registry v4 (4 corners), at block 966,670. The root is read from the registry file when the book is generated.

WHAT IS NOT IN THIS BOOK

No wallet address and no price is printed in this book. A lot is named by its lot id; who holds it is a matter for the registry, not for the map. Streets have a code and, for now, no name. The mint has not happened: plates 11 to 11.2 are a pre-release specimen.

A CITY ON THE MOON, DRAWN LOT BY LOT.

DogCity stands on real lunar terrain, in the Sea of Tranquility (Mare Tranquillitatis). Around Satoshi Plaza it holds 70,714 lots in 2,308 blocks, 9 sectors and 27 rings, cut by 12 avenues.

70,714	2,308	9	27	12	51

THE SNAPSHOT

The city is fixed at Bitcoin block 966,670, the block of the $DOG holder snapshot. Lots, tiers, streets and water are all read from that one state of the registry, and every plate in this book is drawn from it. The registry's Merkle root is printed on the Title Page.

THE BOOK IN ORDER

The book moves from the whole to the single lot. The ground and the fabric of the city come first (plates 01 to 07), then the registry and its 27 sheets, each placing every lot by sector, ring and block (plates 08 to 09.NN). The cemetery follows (plate 10); the indexes close the book.

HOW TO FIND A LOT

Read its lot id: sector, band, block and lot (plate 0.4). Look the id up in the indexes (plates 12 to 12.2), or in atlas.json on the website, and open the registry sheet it names. The key map (plate 08.1) shows where each sheet sits.

WHAT IS NOT HERE

No wallet address and no price. A lot is named by its id; who holds it is a matter for the registry, not for the map. Streets have a code and, for now, no name.

ON-CHAIN

The mint has not happened. Plates 11 to 11.2 are a specimen: the City Charter, which will parent every lot, and one lot deed, which shows the format a lot will take. Nothing in them is inscribed.

HOW TO READ THIS ATLAS

1 STREET ADDRESSES

R1 TO R27 — RINGS

Concentric streets, counted from the plaza outward. R1 is the ring around Satoshi Plaza, R27 is the outermost.

A1 TO A12 — AVENUES

The twelve great radial avenues, named like the hours of a clock face. A12 points north, A3 east, A6 south, A9 west.

h.nn — RADIAL STREETS

Between two avenues there are 13 radial streets, counted clockwise from the avenue before them. 3.07 is the 7th street after A3.

R15 × 3.07 — A CROSSING

A ring first, then a street. R15 × 3.07 is where ring R15 meets street 3.07.

Lanes inside a block are not streets and have no code. Streets have a code and, for now, no name.

2 THE LOT ID

S04-**Q17**-**B1749**-**L017**

SECTOR · BAND · BLOCK · LOT

S = the sector, S01 to S09. Sectors S01 to S06 are the six wedges of the city; S07 is the Spit, S08 the plaza, S09 the bay shore.

Q = the ring band of the block. Band Q lies between ring R18 and ring R19: S04-Q17 sits between R18 (mean radius 4,332 m) and R19 (4,572 m), and the example lot is 4,368 m from the plaza center. The rule holds for 69,705 of 70,714 lots; the Spit, the plaza and some lots of the shores and lakes number their bands by their own order and do not follow it.

B = the block number. Block numbers are printed on the registry sheets (plates 09.nn).

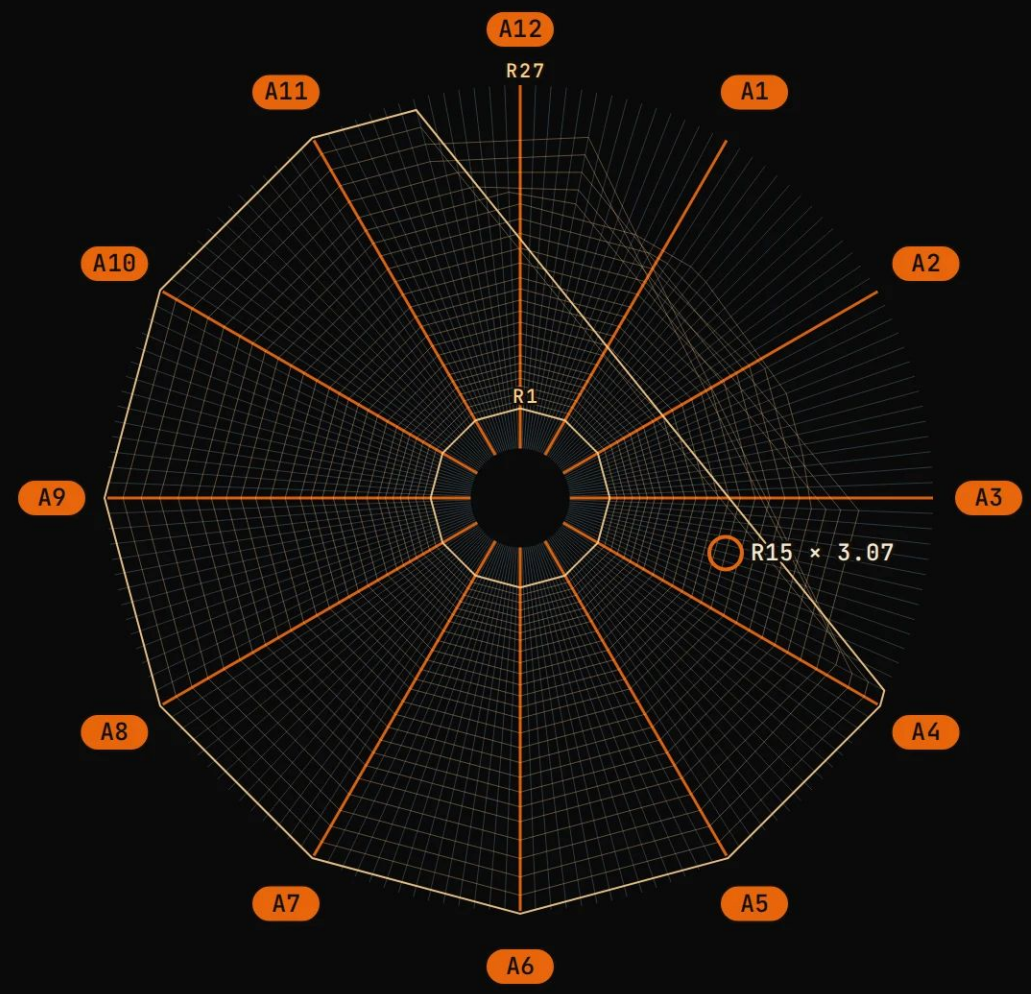
L = the lot inside its block. The example S04-Q17-B1749-L017 is on registry sheet 09.11.

3 SCALES

PLATES 01 02 03 04 05 06 07 08	8.33 M PER PIXEL
SHEETS 09.27	4 M PER PIXEL
SHEETS 09.01-09.26	1.6 M PER PIXEL
PLATES 07.1	1.25 M PER PIXEL
PLATES 10	0.26 M PER PIXEL

Every plate is 2,400 pixels wide and carries its own scale bar. The picture at 2,400 pixels is the reference size.

4 THE CLOCK FACE



The diagram draws the 27 rings and the 168 radials of the plan, not the blocks. The orange ring marks the example crossing.

5 NORTH AND SHEETS

North is up on every city plate. The registry sheets of the Spit and of the bay shore are turned to follow the shore: each carries a north arrow, and a small locator at its top left shows the sheet on the city.

The key map (plate 08.1) shows the rectangle of every registry sheet. The index at the end of the book (plates 12 to 12.2) says which sheet shows a given sector, ring, avenue, block or place.

The full list of lots by sheet is in the atlas data file, atlas.json, for the website to look up.

HOW TO READ A STONE NUMBER

A STONE NUMBER IS L + 5 DIGITS: L00001 TO L15802

EACH ROW HOLDS 344 STONES (172 PER SIDE OF THE CENTER AISLE)

ROW 01 IS THE ONE NEAREST THE GATE; ROWS GROW AWAY FROM THE CITY

ROW N HOLDS L(344 × (N-1) + 1) TO L(344 × N)

ALLEYS 8 M · CROSS PATHS 6 M · GATE FORECOURT 12 M

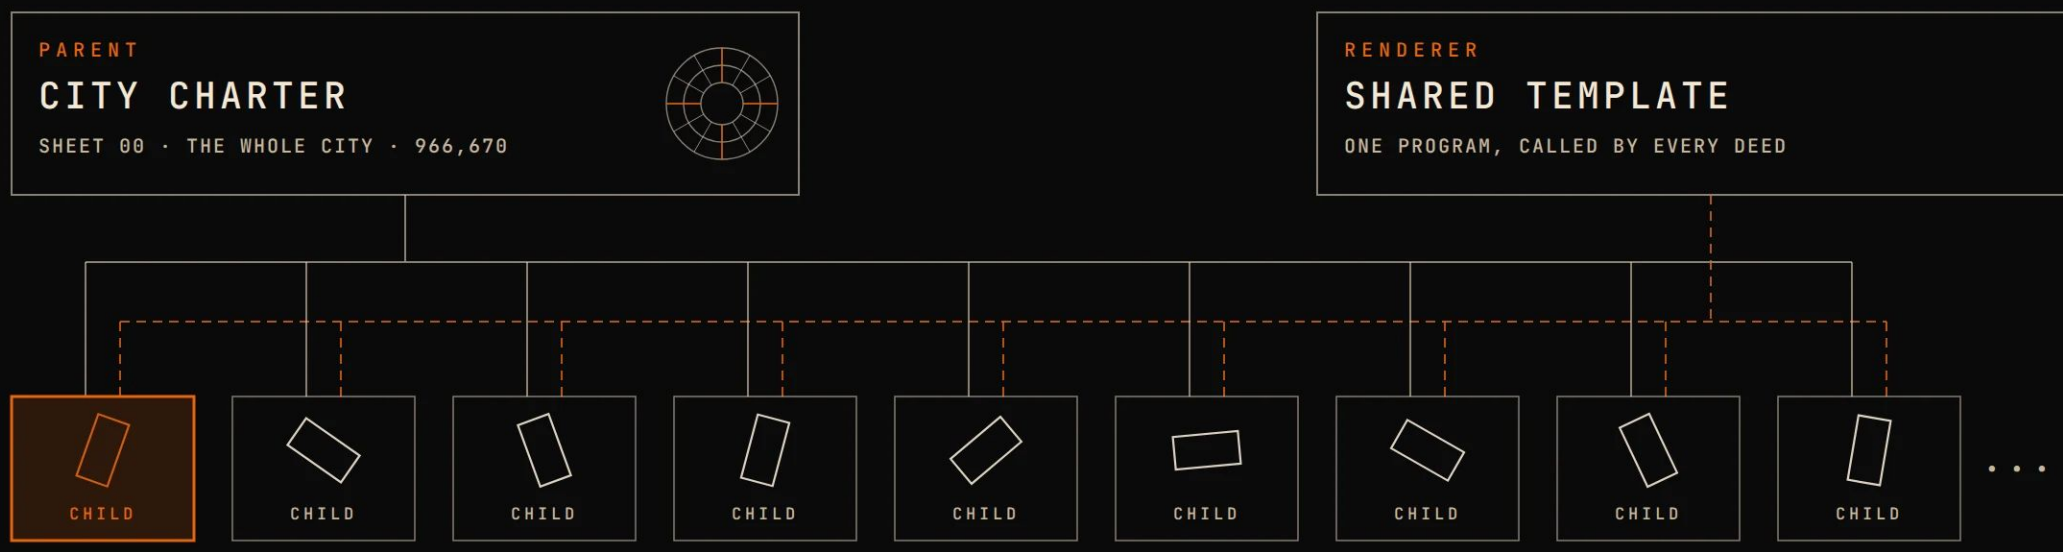
0 100 M

SPECIMEN · PRE-RELEASE

ONE CHARTER.
ONE DEED PER LOT.

On Bitcoin an inscription can be the parent of other inscriptions. The City Charter is the parent: the plan of the whole city, committed by the Merkle root of its lots. At mint, each of the 70,714 lots becomes a child: a deed that holds only that lot's own geometry and draws itself on the Charter.



70,714 DEEDS, ONE PER LOT · SOLID LINE: PARENT · DASHED LINE: CALLS THE TEMPLATE
THE HIGHLIGHTED DEED IS THE SPECIMEN OF PLATE 11.2

A child names its parent, the template and the ground layer by inscription id. It carries only its own data; everything else is drawn by recursion.

THE PARENT

The Charter (plate 11.1) draws the whole city once: water, roads, relief and tiers. Its title block carries the snapshot block, the city version and the Merkle root of the lots.

THE CHILD

A deed (plate 11.2) is a small page of data: the lot id, its four corners, its neighbours, the roads around it and its street address. It carries no owner data.

THE PROOF

The Merkle root commits the geometry of every lot. A deed carries its own proof against that root, and the land registry is checked against it lot by lot.

SPECIMEN. The mint has not happened. Nothing on these plates is inscribed, no lot is assigned, and the drawing number, date, status and mint phase printed on them belong to the specimen.

LOTS MERKLE ROOT

GENERAL NOTES

1. Dimensions and coordinates in metres. Grid crosses every 1 km from the plaza centre.
2. Bearings are relative to city north (−Z).
3. Each lot deed draws its lot on this sheet by recursion and locates it with the sheet transform (axes: x east, z south).
4. Geometry is committed by the Merkle root in the title block.
5. This sheet carries no owner data.

SPECIMEN · PRE-RELEASE

THE PLAN

The whole city on one A2 landscape sheet at 1:60,000, drawn like an architect's plan: frame, grid, legend and title block.

THE TABLES

The sheet transform maps city meters to sheet units, so every deed can place its lot here. The city figures are computed from the registry, not typed.

THE TITLE BLOCK

Snapshot block 966,670, the city version and the Merkle root: the three facts every deed points back to.

SPECIMEN. The mint has not happened. Nothing on these plates is inscribed, no lot is assigned, and the drawing number, date, status and mint phase printed on them belong to the specimen.

THE LOT

S08-Q00-B0004-L001 is a company lot in sector S08, Financial District: 9,318 square meters, four corners, one street address. Company lots carry the same deed as any other lot.

THE CHILD, AS DATA

{"id":"S08-Q00-B0004-L001","t":"co","d":"S08 · SATOSHI PLAZA","a":9318,"q":"B0004","nl":8,"ad":"NEAR R1 × 9.08","c":[-716.09,-253.71],"p":[[9760,5379],[10969,1965],[-9555,-5957],[-11174,-1387]],"n":[[1097,197,1329,-334,-644,-1306,-955,-596,"L002"],[1329,-334,1754,-1070,-77,-2291,-644,-1306,"L003"],[1754,-1070,3072,-2515,...

THE REST OF THE SHEET IS DRAWN BY THE TEMPLATE

READING THE SHEET

The vertex table gives corners A to D in meters from the plaza center, and the perimeter; the area heads the sheet. Arcs show their radius, straight sides their bearing; the key plan at top right is the Charter, reduced.

SPECIMEN. The mint has not happened. Nothing on these plates is inscribed, no lot is assigned, and the drawing number, date, status and mint phase printed on them belong to the specimen.

READING THE TABLE

The city has 2,308 blocks. 2,295 of them have the block number printed on a registry sheet; 13 are too small or too crowded to carry a number at any scale of the sheets.

A block is named by sector, ring band and number: S-Q-B, for example the first three parts of a lot id. A block number alone can repeat between ring bands.

Every block, printed or not, is listed with its sheet in the atlas data file, atlas.json, under the key blocks. Every lot is listed with its sheet under lot_sheet.

A block that crosses the edge of a sheet appears on the next sheet too, with the same number. The table counts a block on every sheet that holds some of its lots, so the column totals can add up to more than the city total.

COLOPHON

DOG·CITY ATLAS

THE DATA

Every plate is drawn from the files of the city in edition 1, snapshot block 966,670: lots, streets, cells, water, cemetery and the catalog of places. The registry Merkle root comes from the DOG DATA registry file. Input digest 7fc662f064610ebf.

THE GROUND

Relief is lunar elevation data from NASA, the terrain the city stands on. Contours, water level and the dome are drawn from the city files, not traced by hand.

THE MAKING

The book is generated by code and typed by nobody: the same data gives the same book. Plates are vector drawings (SVG), rasterized in a headless browser at 2,400 and 1,200 pixels wide. The PDF is assembled from the 2,400 pixel images, one page per plate.

THE TYPE

Set in JetBrains Mono. The specimen sheets of plates 11.1 and 11.2 also use Barlow. Both are free fonts under the SIL Open Font License 1.1, embedded in the plates.

THIRD-PARTY MATERIAL

This book carries no third-party 3D models, photographs or logos. The places on plates 07 and 07.1 are drawn as footprints and marks from the catalog of the city.

WHERE TO FIND IT

The atlas is online at dogdata.xyz/dogcity/atlas, with the full-size plates, the lot lookup and the PDF. The lot-to-sheet table is in atlas.json.
